

ALEXANDRU DIACONU

Security Analyst | AI Security, Security Operations & Threat Detection

+353 87 702 8150 | alexdiaconu369@gmail.com | [LinkedIn](#) | [Portfolio](#)

Newbridge, Co. Kildare | Open to Dublin, hybrid or remote | Available immediately | Irish/EU citizen, no sponsorship required

PROFILE

BSc (Hons) Cybersecurity and Digital Forensics graduate (2:1, TU Dublin), just finished a cybersecurity internship at Frensei Inc. I learn things by building them: a SIEM I then attacked to find out where my own detection rules failed, sensors across three regions to watch real attack traffic rather than read about it, and a forensic scanner for the document tricks used to hide prompt injection from anyone reviewing the file. Available immediately for a graduate role in security operations, detection engineering or AI security.

EDUCATION & CERTIFICATIONS

BSc (Hons) Cybersecurity and Digital Forensics, TU Dublin, Blanchardstown. Second Class Honours, Grade 1 (2:1). Key modules: Software Engineering & Testing 95%, Secure Communications 85%, Digital Forensics 83%, Secure Programming 80%.

TryHackMe Security Engineer, SOC Level 1, AI Security. **AI Security University** Introduction to AI Security, MCP Security Fundamentals. **IBM** System and Network Security, AI Fundamentals, Using QRadar SIEM. **Cisco** Junior Cybersecurity Analyst, Ethical Hacker. **Fortinet** NSE 1. **Google** Chronicle SOAR Analyst, Introduction to Security in the World of AI, Introduction to Generative AI. **AttackIQ** MITRE ATT&CK. **Mastercard** Cybersecurity Job Simulation. Verifiable at [Credly](#) and [Google Skills](#).

TECHNICAL SKILLS

Detection & Response: Wazuh, Splunk, IBM QRadar, Elastic Stack (ELK), Chronicle SOAR, alert triage, escalation, detection rule writing, NIST IR lifecycle, containment, remediation, post-incident review

Offensive Testing & Threat Intelligence: Nmap, Burp Suite, Metasploit, OWASP ZAP, Snyk, Nikto, CVSS rating, remediation tracking, re-scan validation, SAST and DAST, MITRE ATT&CK, threat hunting, OSINT tooling

Network, Identity & Cloud: Suricata IDS/IPS, Wireshark, tcpdump, nftables, IPFire, OAuth 2.0, token lifecycle, TLS and key management, SPF, DKIM, DMARC, AWS (IAM, CloudFormation), Azure, GCP

Forensics & Programming: EnCase, FTK Imager, Autopsy, ALEAPP, Python, SQL, Bash, Java, JavaScript, Git, GitHub Actions CI/CD, pytest, Kali Linux, Ubuntu, Windows

EXPERIENCE

Cybersecurity Intern, Frensei Inc. (AI financial services platform), Remote

May 2026 – Sep 2026

Caught vulnerabilities before release rather than after, by penetration testing each new feature as the development team shipped it, across web application and API surfaces, OAuth 2.0 flows, token lifecycle, TLS and access controls. Closed the loop on every finding by rating it against CVSS, agreeing remediation with the engineers and re-testing to confirm the fix held rather than taking it on trust.

Student Ambassador, Technological University Dublin

Sep 2023 – Apr 2026

Engaged 200+ prospective students across three consecutive intake cycles by delivering presentations and open day events and acting as first point of contact for a high volume of queries.

Retail Assistant, SuperValu, Newbridge (part-time alongside full-time study)

Feb 2023 – May 2026

PROJECTS

Revelio, open source forensic PDF scanner (AI-assisted build, tested and deployed)

Surfaces concealed text that standard PDF readers and text extraction report as absent, by analysing rendered-pixel contrast rather than the file's own declared colour values, catching white-on-white colouring, sub-4pt microfont and invisible OCR layers, the same techniques used to plant prompt injection payloads in documents an AI will read. Shipped with a CLI, web interface, 14-test pytest suite and CI/CD.

ReconBot, AI-assisted OSINT automation tool (three-person team project)

Replaced four separate manual lookups with a single automated query by integrating the GPT-4o-mini API alongside LeakCheck, AbuseIPDB and HaveIBeenPwned into a modular Python bot, graded First Class Honours (80%).

Security Operations Centre (Wazuh SIEM, Suricata IDS, MITRE ATT&CK)

Achieved 100% detection across every ATT&CK-mapped scenario executed, spanning reconnaissance, privilege escalation and credential harvesting, by building a three-server monitoring environment and writing the detection rules myself.

Threat Intelligence Sensor Network (three regions, AWS and DigitalOcean)

Detected 29,000 exploitation attempts against CVE-2025-49844 (CVSS 10.0) within six days of its public disclosure, isolated from 1.78M attacks captured across three regions over 30 days.

Brand Impersonation & Phishing Domain Research (final-year dissertation)

Identified 2,087 registered lookalike domains out of 2,432 permutations tested, 134 of them an active phishing risk, by analysing 15 Irish brands across three independent detection tools.

Cloud Disaster Recovery & Network Hardening

Achieved a 24-minute recovery time against a 4-hour requirement by designing a multi-region AWS architecture with automated failover, validated in a live failure test.

ACCOMPLISHMENTS

Zero Days CTF, placed 15th of 73 college teams nationally, up from 47th of 120 the previous year. **NetTrust**, a wireless security scanner built at the Lovable x Dogpatch Labs hackathon, live at netrust.lovable.app. TU Dublin Ethical Hacker Society, HackTheBox and TryHackMe. Fluent English and Romanian, full clean driving licence.
