

Alexandru Diaconu

Cybersecurity & Digital Forensics Graduate | SOC Analysis, Incident Response & Threat Detection

Dublin, Ireland • alexdiaconu369@gmail.com • linkedin.com/in/alexandru-diaconu • github.com/alex-24 • alex-24-cyber.github.io/AlexDiaconu

PROFILE

Cybersecurity and Digital Forensics graduate (BSc Hons, 2:1) with practical experience across security operations, application security and forensic investigation. Comfortable working end to end: deploying and tuning SIEM stacks, mapping detections to MITRE ATT&CK, analysing attacker behaviour from live honeypot telemetry, and building Python tooling that other people actually use. Currently securing a production AI fintech platform as a cybersecurity intern, and working toward CompTIA CySA+. Seeking a graduate SOC Analyst or Incident Response role.

EDUCATION

BSc (Hons) Cybersecurity & Digital Forensics | Technological University Dublin

2022 – 2026 | *Second Class Honours Grade 1 (2:1), GPA 3.50*

- **Dissertation:** Typosquatting exposure across 15 high-profile Irish brands. Built a three-stage passive reconnaissance pipeline (HavelBeenSquatted Pro, dnstwist, URLCrazy) generating 2,432 permutations and 2,087 registered variants, of which 134 were flagged as phishing. Identified a 7.3× divergence between tools, showing that single-tool studies systematically miscount exposure.
- **Selected modules:** Secure Communications (85%), Group Project (80%), Biometrics & Forensic Applications (75%), Network Security (70%), Application Security, Mobile Device Forensics, Cloud Business Continuity.

EXPERIENCE

Cybersecurity Intern | Frensei Inc. (AI fintech / insurtech)

2026 – Present | *Remote*

- Conduct vulnerability assessments and penetration testing across web applications and API surfaces.
- Review OAuth 2.0 flows, token handling and API authentication mechanisms; audit encryption implementations (AES, TLS) and key management practices.
- Audit Row Level Security policies and multi-tenant access controls in PostgreSQL.
- Support compliance readiness for CASA Tier 2, GDPR and SOC 2, documenting findings, risk ratings and remediation guidance for engineering.

Student Ambassador | TU Dublin, Blanchardstown

Sep 2023 – Apr 2026

- Supported orientation weeks, campus tours and student events; first point of contact for new students navigating a large campus.

Retail Assistant | SuperValu, Newbridge

Feb 2023 – May 2026

- Balanced part-time shifts alongside full-time study; handled payments, refunds, stock control and customer queries.

TECHNICAL PROJECTS

Revelio — Forensic PDF Scanner | Python, PyMuPDF, GitHub Actions, Render

Personal project | MIT licensed, deployed and publicly available

- Four detection modules: hidden text, structural risk, revision diffing and provenance (C2PA), exposed through both a CLI and a web interface.
- 14-test pytest suite with CI/CD via GitHub Actions; graceful degradation when C2PA libraries are unavailable and a platform-aware privacy flag for offline analysis.

Open-Source SOC Implementation | Wazuh 4.14, Suricata 7.0.3, TheHive, MISP, Velociraptor

Academic project, Year 4

- Built a sensor-to-hive architecture collecting telemetry across multiple hosts, then simulated three attack chains (network intrusion, malware infection, privilege escalation).
- Achieved 100% detection across all three chains, with every alert mapped to MITRE ATT&CK techniques and triaged through case management.

Global Honeypot Deployment & Threat Analysis | T-Pot, Elasticsearch, Kibana, AWS, DigitalOcean

Academic project, Year 4

- Ran geographically separated honeypots (Dublin and Singapore) capturing 1.78 million attacks; analysed attacker tooling, credential spraying patterns and payloads.

- Tracked the weaponisation timeline of CVE-2025-49844 across live capture data and documented IOCs for threat intelligence use.

Cloud Business Continuity & Disaster Recovery | AWS, CloudFormation, EC2, RDS, IAM

Academic project, Year 4

- Designed a Pilot Light DR strategy for a healthcare API with cross-region replication (eu-west-1 to eu-west-2), achieving a 24-minute RTO.
- Automated recovery with Infrastructure as Code and enforced least privilege via a DR-Admin IAM role scoped to the secondary region; validated through simulated region failure.

ReconBot — OSINT Discord Bot | Python, Discord.py, OpenAI API

Group project, Year 3 | First Class Honours (80%)

- Eight OSINT commands covering IP geolocation, breach checking (HaveIBeenPwned, LeakCheck), WHOIS, port scanning and Google dorking, with GPT-4o-mini summarising results for non-experts.
- Security-first design: k-anonymity for password checks, ephemeral responses and explicit ethical usage warnings. Delivered with 82 pages of technical documentation.

TECHNICAL SKILLS

SIEM & Detection: Wazuh, Splunk, IBM QRadar, Elastic Stack, Suricata, Google Chronicle SOAR, TheHive, MISP, Velociraptor

Digital Forensics: EnCase, FTK Imager, Autopsy, ALEAPP, PyMuPDF; Windows and Android disk image analysis

Offensive & AppSec: Nmap, Burp Suite, Metasploit, OWASP ZAP, Snyk, Wireshark, Hashcat, John the Ripper

Cloud & Network: AWS (EC2, RDS, IAM, CloudFormation), nftables, IPFire, Packet Tracer, hping3, tcpdump

Programming: Python, SQL, PHP, JavaScript, Java, HTML/CSS, Bash

Frameworks & Standards: MITRE ATT&CK, OWASP Top 10, OWASP ASVS, GDPR, SOC 2, CASA Tier 2

Operating Systems: Kali Linux, Ubuntu, Windows

CERTIFICATIONS

Cisco Ethical Hacker • Cisco Junior Cybersecurity Analyst • IBM QRadar SIEM • Google Cloud Chronicle SOAR (Fundamentals and Analyst) • Splunk (Intro, Threats & Attacks, Visualizations) • AttackIQ Foundations of Operationalizing MITRE ATT&CK v13 • TryHackMe SOC Level 1 • TryHackMe AI Security • **CompTIA CySA+ (in progress)**

ADDITIONAL

Competitions: Zero Days CTF 2025 – 47th of 120 competitors. Active on TryHackMe and CryptoHack.

Languages: Romanian (native), English (fluent).

Interests: CTF competitions, football (player and coach), strength training.
